The following is a list of some of the courses taken by students in agricultural mechanization. Also listed are the instructor or instructors who first taught the course, followed by other instructors in parenthesis, the date the course was first offered, and the dates the course was changed.

It may help to know that in the early days all courses carried one departmental designation—Agron, FM, or AE. In 1958 the designations were changed so that the agricultural mechanization courses were given the designation “AG M,” later to become “TSM,” while the engineering courses retained the designation “AE.” The numbers used have a hierarchy which is 100-level courses are for freshmen and sophomores, 200-level for sophomores and juniors, 300-level for seniors and graduate students, and 400-level for graduate students. Within the hierarchy, courses in the 30 series are field machinery, 40 series designate farm power, 50 series are soil and water, 60 series deal with housing, 70 series is farm structures, 80 series covers electric power and processing, and the 90 series is reserved for individual study.

AG M 299: “Agricultural Mechanization Seminar” Faculty, 1959; TSM 299:

The following courses were taught for several years but were discontinued and are listed to make the course record more complete and illustrate the trends and changes in the curriculum.

(AE 355 and AE 471 were taught extra murally with special consideration for graduate credit for vocational agricultural teachers.)

The first name given is the instructor that developed the course. The names in parenthesis are instructors during subsequent years, following that are the dates of changes.

**Farm Power and Machinery**

**Soil and Water Engineering**

(The above two courses, AE 356 and AE 357, were previously listed as Hydraulics of Soil and Water Conservation, AE 42 1939, AE 351 1948 and were taught by E. W. Lehmann until 1948 and then by R. C. Hay until 1954.)
Farm Structures
AE 376: Advanced Design of Farm Structures” W. A. Foster, (D. G. Carter J. 0. Curtis, E. L. Hansen); AE 41: 1939; AE 371: 1948; AE 376: 1959 discontinued 1966. (This course was taught by D. G. Carter from 1941 to 1956.)

Electric Power and Processing and Food Engineering
AE 282: “Food Packaging Technology” E. D. Rodda, (S. A. Morris), 1993
This list contains those who earned a Bachelor of Science degree in farm mechanics or agricultural mechanization awarded by the College of Agricultural, Consumer and Environmental Sciences. It also includes those we could identify that majored in the department irrespective of the wording on their diploma.

Han, Shufeng  A field information system for site-specific crop management (Goering)
Liao, Ke  A knowledge-based machine vision system for grain quality inspection (Paulsen)
Rausch, Kent D.  Evaluation of the resistance-capacitance method for detection of reduced corn wet milling quality (Eckhoff)
Yu, Sin-te Chin-Yu  Boundary modeling of saturated flow during steady application of municipal effluent in a subsurface irrigation and drainage field (Konyha)

1994

Chang, Young-chang  A color calibration procedure for machine vision (Reid)
Funk, Ted L.  Anemometry tools and procedures for greenhouse experiments (Christianson)
Hulbert, Greg  MRI temperature mapping and finite element modeling of heat transfer in carrot particulates undergoing thermal processing (Litchfield)
McIsaac, Gregory F.  The effects of selected corn-soybean tillage systems on rill cross sectional geometry and soil erosion for two Illinois soils (Mitchell)
Ngunjiri, Godfrey  Wheel traffic effects on soil compaction and corn production (Siemens)
Shaw, Bryan W.  Use of a convective emission chamber to study particle resuspension (Christianson)

1995

Birrell, Stuart J.  Multi-isfet sensor system for soil analysis (Hummel)
Filho, Jose Francisco Lopes  Intermittent milling and dynamic steeping process for corn starch recovery (Eckhoff)
Li, Zhenhai  Fundamental studies on ventilation for improving thermal comfort conditions and indoor air quality (Christianson)
Zhu, Jun  Study on the fundamental causes of metal corrosion in animal buildings: field and chamber tests (Riskowski)

1996
Kantt, Carlos A.  Temperature mapping of particles during aseptic processing via magnetic resonance imaging (Litchfield)
Le Roux, Louis D.  Dewatering biosolids from a milk processing plant: agricultural fibers as flocculant aids and ultrafiltration membrane concentration (Litchfield)
Li, Zhiwei  Machine vision sensing of ajuga plant cell suspension cultures (Reid)
Mehra, Suhas K.  Factors influencing Beall degeneration of corn for dry milling (Eckhoff)
Ni, Bingcheng  Automated corn kernel quality inspection using machine vision (Paulsen)
Walker, Sharyl E.  Modeling nitrate in tile-drained watersheds of east-central Illinois (Mitchell)

1997
Ahmad, Irfan S.  Image-based analysis of fungal-damaged soybeans (Reid)
Arogo, Jactone  Hydrogen sulfide emission and control parameters from stored liquid swine manure (Riskowski)
Du, Ling  Evaluation of an alkali corn wet milling process (Eckhoff)
Jiang, Naqian  Hydraulic performance of porous sediment control structures (Hirschi)
McLaughlin, Jon K.  Supervisory control of a commercial heating, ventilating, and air conditioning system (Christianson)
Singh, Navpreet  Microfiltration of corn starch hydrolysate using ceramic membranes (Cheryan)
This list includes all of those who held faculty appointments including those in agronomy that had an assignment to teach, do research, or conduct extension programs. Those identified with a (2) held an appointment earlier but not as faculty.
